

PDF2ANYTHING[©]

.....and ANYTHING -to- PDF

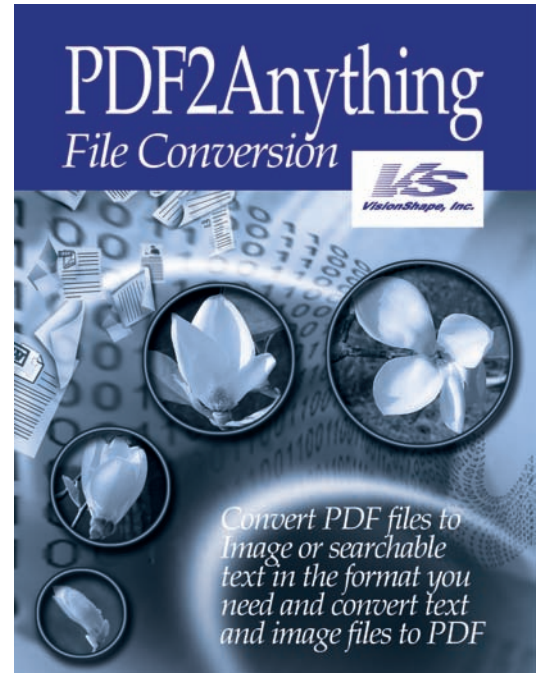

VisionShape's PDF2Anything[©] is a powerful conversion utility that leverages OCR (Optical Character Recognition) and other technologies to get the files into or out of PDF format. PDF2Anything helps you manage your business documents without worrying about what brand or type of software created the files.

PDF files can be generated through a print driver or specialized conversion software, but are also often created from scanned images. Such image-based PDF files are unintelligent files which are not searchable. You can remedy this with PDF2Anything[©] which allows you to work with document images just as you would work with paper. Combine or separate pages within a document, search for and find relevant information within pages, edit text and add notes.

PDF2Anything[©] is affordable and easy to use. It can convert your PDF files into fully formatted Microsoft Word compatible documents for editing. Or, you can convert PDF files into almost any image file format so that it can be merged and included with other documents. And, in addition to all this, you can perform the reverse process and create PDF files from almost any type of image file, allowing anyone with a PDF viewer to look at the documents. This feature is particularly useful for merging several files in different formats to produce a single multi-page file.

FEATURES/BENEFITS:

- ◆ Eliminates the need to re-key information
- ◆ Eliminates the need to reformat the page layout
- ◆ Gives you access to data contained in PDF files
- ◆ Easy way to create PDF files from images
- ◆ Makes searching for data in PDF easy and fast
- ◆ Documents can be shared easily and PDF's can be viewed by anyone
- ◆ Cost-effective alternative to Adobe Acrobat[®]
- ◆ Service program available for corporate applications and for conversion services
- ◆ Conversion of single or multiple input files into single or multiple output files
- ◆ Selectable resolution for conversion of PDF files into image files
- ◆ Full support for color, gray or black and white images
- ◆ Image files may be combined into one output or multi image files may be split into multiple files
