

AutoScan Capture

Capture for Electronic Document Management

VisionShape's AutoScan Capture is a versatile, cost-efficient high speed document scanning solution that manages the capture and indexing of your documents. It has been selected by thousands of the most demanding users because of its flexibility and full set of features.

AutoScan Capture is quick and easy-to-use. The basic AutoScan Capture has all the features needed to start your document management system. With support for over 400 models of scanners, including the world's major desktop Check Scanners, complete with MICR (E13B or CMC7) reading, you should never have incompatibility headaches. It includes a file importer mode to import most image formats.

The batch controls allow automated multi-level indexing. Images are cleaned for legibility, improved compression and better OCR recognition. Simulated duplex lets you save money by using a single-sided scanner if you only have a few double-sided pages. Images can be output in bitonal, grayscale or color images or PDFs. Powerful export scripts allow output into almost any back end document repository system accessible locally or over your LAN.

Advanced options include 1D and 2D barcode reading, OCR and OMR; Bates Stamping for the legal market, ISIS drivers, ODBC interfacing and more. These modular components make AutoScan Capture a versatile product, able to meet the requirements of many different vertical markets. Whether used in legal, freight or government departments, it grows with you. Different modules can easily be added as and when required.

Capture paper documents quickly with AutoScan Capture regardless of the volume of documents. There are no volume restrictions or 'click charges' per scan. Whether you have just a few documents or many thousands a day, AutoScan Capture will handle them in a cost efficient manner--growing with your business.

From demanding service bureaus needing high-speed capture of many thousands of documents a day to small organizations with a few hundred documents, AutoScan Capture is the solution.
